# WESTERN POWER DISTRIBUTION LV CONNECT & MANAGE

---

---

## Project Description

This project will demonstrate and prove that LV ANM can be used as a short-term measure, whilst network reinforcement takes place, to facilitate the timely connection of customers.

The solution can then be re-deployed to another area when the need case arises. Moreover, the ANM solution provides a long-term alternative to network reinforcement in cases where the investment in traditional assets is not economically viable or other reasons (such as the disruption to customers) prevents reinforcement taking place.

## Areas of Work

The battery energy storage trial will encompass up to 50 customers and the electric vehicle trial will encompass up to 50 customers. The battery energy storage ANM trial will take place in Milton Keynes. The electric vehicle ANM trial will take place in Nottingham.

**Project Partners:** PowerPlus Communications, Nortech Management Limited – Project Delivery Support and Active Network Management Control System Equipment supplier
