

# WESTERN POWER DISTRIBUTION PROJECT NEXUS - TELECOMS ANALYSIS

## Project Description

The purpose of this project is to complete a comprehensive global analysis of proposed and installed Smart Grid Telecommunications solutions as well as identifying and quantifying the specific design, services and data-flows within the Smart Grid.

By better understanding the Smart Grid as whole, informed decisions can be made regarding future installation of Smart Grid solutions and how that will interact with or replace existing communication systems within the UK Distribution Networks.

## Areas of Work

The project will undertake an analysis of installed Smart Grids and their associated Telecommunications solutions throughout the UK, Europe and the Rest of the World. Understandably this will be highly selective.

The geographical area covers all four of the WPD license areas, namely East Midlands, West Midlands, South Wales and South West England.

**Project Partners:** Analysys Mason Ltd
